

VIRTUOSANT

Virtuosant releases VFAST Bundles

Atlanta, GA, United States, 05/18/2009 – Virtuosant Technology, Inc. today announced the Virtuosant Foundation Application Solution Technology (VFAST™) Bundles™. Focused specifically to meet the needs of small to medium healthcare businesses, the VFAST Bundles™ now make the customized portal and business intelligence solutions that Virtuosant is known for, available to this emerging market. The VFAST Bundles are delivered with the IBM Lotus Foundations® software and IBM WebSphere Portal Express®.

In conjunction with Virtuosant Technology's Healthcare Operational Portal™, a powerful business intelligence tool, VFAST Bundles offers small to medium-sized hospitals and specialty clinics such as radiological services centers, MRI centers, dialysis centers, and chiropractic practices the ability to quickly and cost effectively create a meaningful and timely management information system that otherwise would be available only to large scale institutions.

Custom portal implementations can be both complex and costly. A typical implementation can take over four months and cost hundreds of thousands of dollars thereby placing them out of range for many small to medium size companies. Available as a single-install package, the VFAST Bundles utilize the VFAST Foundation Portal™ product to produce a customized, implementation of IBM WebSphere Portal Express in a matter of days and at a fraction of costs afforded by larger companies.

In addition, by utilizing IBM Lotus Foundations software, the bundles provide all the essential software needed to share information, keep people connected and help ensure data is protected, enabling smaller companies with little or no in-house IT skills to focus on their business, not their IT. Some of the specific functionality provided is email, backup and recovery, security, and an office productivity suite.

Virtuosant's bundled offerings include VFAST Portal Express™; Portal-in-a-Box™, and Hosted Plus™. Each VFAST Bundle provides a complete solution, including: hosting (if needed), server hardware, portal application, professional services, training, and customer service.

About Virtuosant Technology
