

VIRTUOSANT

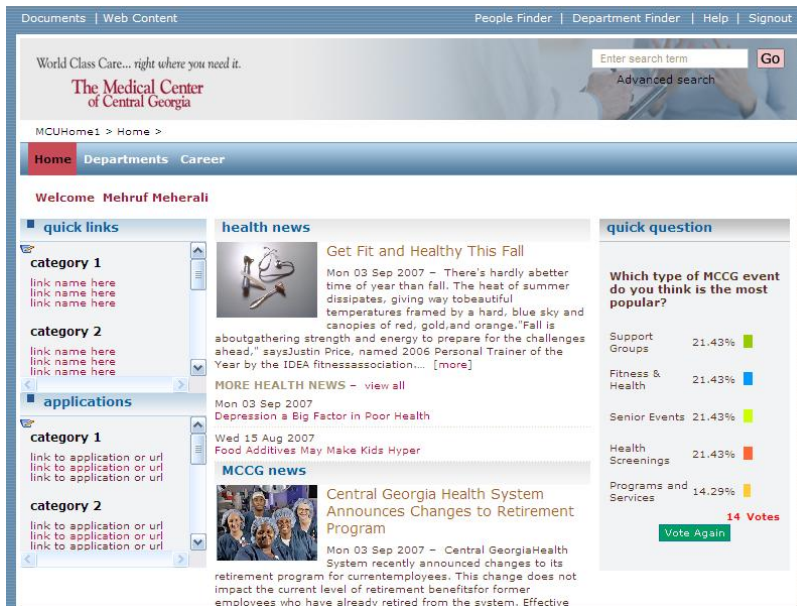

- Are you dealing with impractical deadlines?
- Is your portal project costing more than expected?
- Are you spending too much time developing and project managing a solution that should be fast and easy?

We deliver both a quick-start portal solution for IBM® WebSphere® Portal users and Portal Solution Packs™ for deep industry or vertical coverage. Our cornerstone technology is called the Virtuosant Foundation Application Solution Technology™ or VFAST™, a set of powerful portal developmental products including the Virtuosant Foundation Portal™ which provides a framework for navigation, graphics, themes and skins. The Virtuosant Portal Solution Packs provide out-of-the box, industry specific portal solutions.

Mitigate your project's high costs, unforeseen delays, slow ramp-up time, and long development efforts. Call us to find out more about the VFAST™ and our modular PSPs that can help you save significant time and money so you can start using your investment instead of developing it.

Our product solutions are industry agnostic. Visit us online or call us to schedule a demonstration so you can review the Virtuosant Foundation Portal (VFP) and see how it has been tailored for automotive, healthcare, commerce, financial and other specific industry deployments. Rapid use and deployment means faster ROI for your investment.
